SpaceLock™

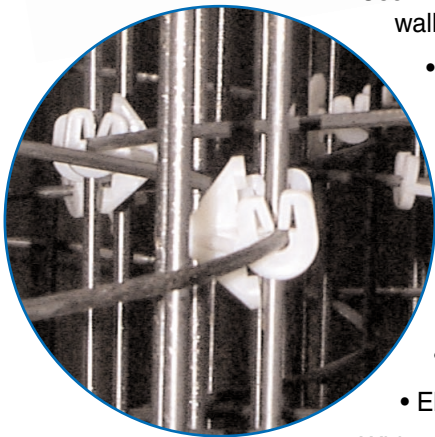

Pyramid Spacers

Use SpaceLock™ Pyramid Spacers to position mesh reinforcement during concrete production. The durable, non-corrosive plastic spacers incorporate a patented interlocking feature that “locks” them in place. This system eliminates the movement of the spacer and prevents reinforcement shifting during production. The end result is a uniform concrete cover.

**For Use With Welded Wire
Fabrics and Wire Cages**

F E A T U R E S

- Use with precast or pour-in-place structures (i.e. pipe, manholes, slabs, floors, wall panels, box culverts and more – anywhere mesh reinforcement is required)
- Patented interlocking feature eliminates spacer movement which maintains constant mesh placement and uniform concrete cover
- Virtually eliminates the rejection of product due to misplaced reinforcement – a tremendous cost savings!
- Easily snaps onto horizontal or vertical wires
- More placement versatility than other spacing alternatives
- Made of durable, non-corrosive plastic – no exposed metal to rust or corrode
- Safe to handle – eliminates handling injuries
- Eliminates equipment downtime and repair costs – no damaged forms or flat tires
- Wide variety of sizes available to provide concrete cover ($1/4$ " increments)
